## Overview

### Be Ready for Tomorrow – Today

RF requirements keep growing while timelines keep shrinking. To help ease the technical and business pressures, the right test solution provides continuity in measurements and longevity in capability. The Keysight Technologies, Inc. M9381A PXIe vector signal generator (PXI VSG) is the next logical step in RF signal generation.

To get proven results even faster, use Keysight software with the PXI VSG to create the test stimulus you need to validate and test your RF communications designs. Signal Studio and Waveform Creator software simplify and streamline signal creation and generation from basic analog and digital modulation to the latest wireless standards like LTE-Advanced and 802.11ac WLAN.

Combine the M9381A PXI VSG with the M9391A PXIe vector signal analyzer for a complete solution for fast, high quality measurements optimized for RF manufacturing test environments. From fully modular hardware to software leverage to worldwide support, the PXI VSG is the low-risk way to manage change and be ready for tomorrow – today.

### Product description

The M9381A PXIe vector signal generator (PXI VSG) is a compact modular instrument that provides frequency coverage from 1 MHz to 6 GHz and up to 160 MHz RF modulation bandwidth. The M9381A is comprised of four individual PXIe modules – M9311A modulator, M9310A source output, M9301A synthesizer, and M9300A frequency reference. A single M9300A frequency reference can be shared between multiple instruments to minimize footprint. A wide range of instrument drivers are available to support your development environment of choice.

The flexible, modular design of the M9381A enables you to efficiently scale to multi-channel signal generation to test multiple-input, multiple-output (MIMO) devices. Many capability options such as memory, frequency range and modulation bandwidth can also be easily upgraded in the field.

### Applications

- Power amplifier and front-end-module design validation and manufacturing
- Radio transceiver design validation and production test
- MIMO and multi-channel device test

### Reference solutions

Application-specific reference solutions, a combination of recommended hardware, software, and measurement expertise, provide the essential components of a test system. The following reference solutions include the M9381A PXI VSG as a hardware component:

- RF power amplifier/front end module characterization and test, Reference Solution for the industry's fastest power amplifier test solution including envelope tracking test, rapid waveform download, tight synchronization, automated calibration and digital pre-distortion. For more information, see [www.keysight.com/find/solution-padvt](http://www.keysight.com/find/solution-padvt)
- LTE/LTE-Advanced multi-channel test, Reference Solution for faster insight into carrier aggregation, spatial multiplexing MIMO and beamforming designs. For more information, see [www.keysight.com/find/solution-LTE](http://www.keysight.com/find/solution-LTE)

## Technical Specifications and Characteristics

### Definitions for specifications

**Temperatures** referred to in this document are defined as follows:

- Full temperature range = Individual module temperature of  $\leq 75$  °C as reported by the module, and environment temperature of 0 to 55 °C.
- Controlled temperature range = Individual module temperature of  $\leq 55$  °C as reported by the module, and environment temperature of 20 to 30 °C.

**Specifications** describe the warranted performance of calibrated instruments. Data represented in this document are specifications under the following conditions unless otherwise noted.

- Calibrated instruments have been stored for a minimum of 2 hours within the full temperature range
- 45 minute warm-up time
- Calibration cycle maintained
- When used with Keysight M9300A frequency reference and Keysight interconnect cables

**Characteristics** describe product performance that is useful in the application of the product, but that is not covered by the product warranty. Characteristics are often referred to as *Typical* or *Nominal* values and are italicized.

- *Typical* describes characteristic performance, which 80% of instruments will meet when operated within the controlled temperature range.
- *Nominal* describes representative performance that is useful in the application of the product when operated within the controlled temperature range.

### Recommended best practices in use

- Use slot blockers and EMC filler panels in empty module slots to ensure proper operating temperatures. Keysight chassis and slot blockers optimize module temperature performance and reliability of test.
- Set chassis fan to high at environmental temperatures above 45 °C.
- Maintain temperature stability for best multi-channel phase coherence
  - Set chassis fans to maximum
  - Maintain stable ambient temperature
  - Perform warm-up with session open and representative waveform running

### Additional information

- Specifications use the normal PLL mode setting, unless otherwise stated. Narrow loop bandwidth refers to specifications using the best wide offset PLL mode setting AGM938X\_VAL\_SYNTHESIZER\_PLL\_MODE\_BEST\_WIDE\_OFFSET, available in the M938x Vector Signal Generator/CW Source Instrument Drivers versions 1.2.300 and later.
- Performance described in this document applies for module temperature within  $\pm 5$  degrees of IQ alignment, unless otherwise noted.
- When configured for multi-channel, phase-coherent operation (shared synthesizer configuration), instrument level warranted specifications only apply to the M9381A which was previously calibrated with the M9301A synthesizer, showing a valid calibration indicator. For all other M9381A channels, specifications revert to typical performance. If using an external LO distribution unit, such as the V2802A LO distribution network, specifications for all M9381A channels revert to typical performance.
- All graphs contain measured data from one unit and are representative of product performance within the controlled temperature range unless otherwise noted.
- The specifications contained in this document are subject to change.

List mode	
List mode channel parameters	80 parameters including RF frequency, power, modulation arb and baseband, ALC, power search, triggers
Dwell time	0 to 429 seconds
Number of points	1 to 3201
Triggering	Immediate, external, software, timer

1. Time from trigger input to frequency and amplitude settled within limits given below with digital modulation on and channel corrections enabled. Specifications are for amplitudes lower than +17 dBm and using an M9036A embedded controller in an M9018A chassis.
2. Baseband offset frequency settled within 100 Hz. Baseband offset can be adjusted  $\pm$  from carrier frequency within limits determined by RF modulation bandwidth. Synthesizer frequency and amplitude are not changing and ALC off.
3. Carrier frequency settled within 1 ppm or 1 kHz, whichever is greater, and amplitude settled within 0.2 dB (within the controlled temperature range) or within 0.5 dB (at the full temperature range). For frequency changes  $\geq 1.6$  GHz at carriers  $\geq 3.2$  GHz nominal frequency settling time within  $\pm 0.05\%$  of final frequency is 125  $\mu\text{s}$ . Simultaneous carrier frequency and amplitude switching.
4. Frequency bands: One (1 to 400 MHz); Two (> 400 to < 750 MHz); Three ( $\geq 750$  to < 1500 MHz); Four ( $\geq 1500$  to < 3000 MHz); Five ( $\geq 3000$  to 6000 MHz).
5. Mean time from IVI command to carrier frequency settled within 1 ppm or 1 kHz whichever is greater and amplitude settled within 0.2 dB. Simultaneous carrier frequency and amplitude switching.

30. Samples of this product have been type tested in accordance with the Keysight Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation and end-use – those stresses include but are not limited to temperature, humidity, shock, vibration, altitude and power-line conditions. Test methods are aligned with IEC 60068-2 and levels are similar to MIL-PRF-28800F Class 3.

31. At 15,000 feet, the maximum environmental temperature is de-rated to 52 °C.

## Technical Specifications and Characteristics

<b>System requirements</b>	
<b>Topic</b>	
Operating systems	Windows 7 (32-bit and 64-bit)
Processor speed	1 GHz 32-bit (x86), 1 GHz 64-bit (x64) (no support for Itanium 64)
Available memory	4 GB minimum 8 GB or greater recommended
Available disk space <sup>32</sup>	1.5 GB available hard disk space, includes: 1 GB available for Microsoft .NET framework 3.5 SP1 <sup>33</sup> 100 MB for Keysight IO libraries suite
Video	Support for DirectX 9 graphics with 128 MB graphics memory recommended (Super VGA graphics is supported)
Browser	Microsoft Internet Explorer 7 or greater
<b>M938x vector signal generator/CW source instrument drivers</b>	
Keysight IO libraries	Version 16.3.17914 or later
Narrow loop bandwidth	Narrow loop bandwidth using the best wide offset PLL mode setting AGM938X_VAL_SYNTHESIZER_PLL_MODE_BEST_WIDE_OFFSET requires instrument drivers version 1.2.300.0 or later

32. Because of the installation procedure, less disk space may be required for operation than is required for installation.

33. .NET framework runtime components are installed by default with Windows Vista and Windows 7. Therefore, you may not need this amount of available disk space.

## Software

Instrument connection software			
	Keysight IO library	<p>The IO library suite offers a single entry point for connection to the most common instruments including AXIe, PXI, GPIB, USB, Ethernet/LAN, RS-232, and VXI test instruments from Keysight and other vendors. It automatically discovers interfaces, chassis, and instruments. The graphical user interface allows you to search for, verify, and update IVI instrument and soft front panel drivers for modular and traditional instruments. The IO suite safely installs in side-by-side mode with NI I/O software.</p>	Free software download at <a href="http://www.keysight.com/find/iosuite">www.keysight.com/find/iosuite</a>
Module setup and usage			
	Keysight soft front panel	The PXI module includes a soft front panel (SFP), a software based graphical user interface (GUI) which enables the instrument's capabilities from your PC.	Included on CD-ROM shipped with module or <a href="#">online</a>
Programming			
Driver	Development environments		
IVI-COM	Visual Studio	Included on CD-ROM shipped with module or <a href="#">online</a>	
IVI-C	(VB.NET, C#, C/C++)		
LabVIEW	VEE		
MATLAB	LabVIEW, LabWindows/CVI, MATLAB		
Programming assistance			
	Command Expert	Assists in finding the right instrument commands and setting correct parameters. A simple interface includes documentation, examples, syntax checking, command execution, and debug tools to build sequences for integration in Excel, MATLAB, Visual Studio, LabVIEW, VEE, and SystemVue.	Free software download at <a href="http://www.keysight.com/find/commandexpert">www.keysight.com/find/commandexpert</a>
Programming examples	Each module includes programming examples for Visual Studio.net, LabVIEW, MATLAB, LabWindows, and Keysight VEE Pro.	Included on CD-ROM shipped with module or <a href="#">online</a>	
Signal generation software			
	Signal Studio	Suite of flexible, easy-to-use, signal creation tools that provides validated and performance optimized reference signals for commonly used communications standards. It configures signals in an easy-to-use, application specific graphical interface and enables you to scale the capability and performance to meet your specific test needs.	Licensed software. For more information, visit <a href="http://www.keysight.com/find/signalstudio">www.keysight.com/find/signalstudio</a>
	Waveform Creator	Built around a drag-and-drop graphical user interface, Waveform Creator enables quick development of multi-format, multi-track custom waveforms to be used in the validation and test of digital communications products	Licensed software. For more information, visit <a href="http://www.keysight.com/find/m9099">www.keysight.com/find/m9099</a>
	SystemVue	System-level EDA software platform for designing communications and defense systems. Used with the M9381A, SystemVue bridges the gap between simulation and prototyping to reduce design iterations and accelerate deployment of emerging wireless technologies.	Licensed software. For more information, visit <a href="http://www.keysight.com/find/systemvue">www.keysight.com/find/systemvue</a>
	MATLAB	Interactive tools and command-line functions for instrument control and data analysis tasks such as signal processing, signal modulation, and digital filtering.	Licensed software. For more information, visit <a href="http://www.keysight.com/find/matlab">www.keysight.com/find/matlab</a>

## Setup and Calibration Services

<b>Assistance</b>		
One day startup assistance	Gain access to a technical expert who will help you get started quickly with the M9381A VSG and its powerful software tools. The flexible instruction format is designed to get you to your first measurements and familiarize you with ways to adapt the equipment to a specific application.	Included in base configuration
<b>Calibration and traceability</b>		
Factory calibration	The M9381A VSG ships factory calibrated with an ISO-9002, NIST-traceable calibration certificate.	Included in base configuration
Calibration cycle	A one year calibration cycle is recommended.	
Calibration sites	<ul style="list-style-type: none"> <li>– At Keysight Worldwide Service Centers</li> <li>– On-site by Keysight</li> <li>– By self-maintainers</li> </ul>	For more information visit <a href="http://www.keysight.com/find/infoline">www.keysight.com/find/infoline</a>
N7800A calibration and adjustment software	The M9381A VSG is supported by Keysight’s calibration and adjustment software. This is the same software used at Keysight service centers to automate calibration. The software offers compliance tests for ISO 17025:2005, ANSI/NCSL Z540.3-2006, and measurement uncertainty per ISO Guide to Expression of Measurement Uncertainty.	Licensed software. For more information, visit <a href="http://www.keysight.com/find/calibrationsoftware">www.keysight.com/find/calibrationsoftware</a>
Keysight calibration status utility	The Keysight calibration status utility helps ensure your M9381A is calibrated by managing the calibration interval and providing messages regarding instrument and module calibration status.	Included in base configuration

## Support and Warranty

<b>Warranty</b>		
Global warranty	Keysight's warranty service provides standard coverage for the country where product is used. <ul style="list-style-type: none"> <li>– All parts and labor necessary to return to full specified performance</li> <li>– Recalibration for products supplied originally with a calibration certificate</li> <li>– Return shipment</li> </ul>	Included
Standard	Return to Keysight warranty – 3 years 15 days typical turnaround repair service	Included
R-51B-001-5Z	Return to Keysight warranty – 5 years 15 days typical turnaround repair service	
R-51B-001-3X Express warranty 3 years	The express warranty upgrades the global warranty to provide, for 3 years, a 5 day typical turnaround repair service in the US, Japan, China and many EU countries.	Optional
R-51B-001-5X Express warranty 5 years	The express warranty upgrades the global warranty to provide, for 5 years, a 5-day typical turnaround repair service in the US, Japan, China and many EU countries.	Optional
<b>Support</b>		
Core exchange program	Keysight's replacement core exchange program allows fast and easy module repairs. A replacement core assembly is a fully functioning pre-calibrated module replacement that is updated with the defective module serial number, allowing the replacement module to retain the original serial number.	For qualified self maintainers in US only
Self-test utility	A self-test utility runs a set of internal tests which verifies the health of the modules and reports their status.	Included in base configuration
